...should also be built on a firm foundation of acknowledging cultural differences. Cultural competencies, such as avoiding cultural bias that leads to potential assumptions about behaviors, stereotypes, microaggressions and discrimination are important to effective crisis response. Students should be encouraged to be given thorough feedback on their behavior and opportunities to reflect and communicate with the class and teacher.

Webinar Recordings

InterACTT has teamed with DPrep Safety to share these monthly conversations related to threat and violence risk assessment in K-12, college, and workplace cases. Our team and expert guests will discuss topics related to risk and protective factors, interviewing techniques, deception detection, impression management, social media threat, incels, white supremacy, gatekeeping/triage, behavioral intervention teams, cultural competency, report writing, and case management.

What are some things you are hoping to gain from this training?

More confidence in risk assessment and threat assessment

Operating a BIT more effectively, checklists and processes

Learning from after-action, post incident

Understanding how to talk about feeling vs. being threatened

Learning about Neurodivergence and legal issues in assessment

Reviewing resources, organizations and tools

**Recognition that there is
a vast range of
structures and resources
across the WTCs colleges
for Cares/BIT**

BEHAVIORAL THREAT ASSESSMENT UNITS

A GUIDE FOR STATE AND LOCAL LAW ENFORCEMENT
TO PREVENT TARGETED VIOLENCE

U.S. DEPARTMENT OF HOMELAND SECURITY
UNITED STATES SECRET SERVICE
NATIONAL THREAT ASSESSMENT CENTER

New Release!

THE PRINCIPLES AND OBJECTIVES OF BEHAVIORAL THREAT ASSESSMENT

The Secret Service recognizes that preventing targeted violence is possible if communities are equipped with the training and resources necessary to identify individuals of concern, assess their risk of violence, and intervene appropriately, namely through **behavioral threat assessment** (also referred to as behavioral threat assessment and management or “BTAM”). Behavioral threat assessment is an approach to proactively prevent incidents of targeted violence. NTAC research and Secret Service operational experience have established that behavioral threat assessment:

Behavioral Threat Assessment:

A behavior-based approach to proactively prevent incidents of targeted violence.

THE FRAMEWORK

- STEP 1:** Establish a Behavioral Threat Assessment Unit and Policy
- STEP 2:** Create Operational Protocols and Procedures
- STEP 3:** Identify and Process Reports of Concerning Behavior
- STEP 4:** Gather Information to Assess for Risk
- STEP 5:** Develop Risk Management Strategies
- STEP 6:** Promote Continuous Improvement and a Culture of Prevention

THE SECRET SERVICE MODEL

The Secret Service originally developed behavioral threat assessment to prevent assassinations and safeguard the nation's leaders. The process was built upon NTAC's research which found that most individuals who engage in acts of targeted violence elicit concern in those around them prior to the attack. The Secret Service model, therefore, is designed to **identify** individuals displaying threatening or concerning behavior, gather information to **assess** if an individual poses a risk of violence, and then **manage** the risk by implementing appropriate interventions.

The Secret Service model has since been adapted to prevent all forms of targeted violence impacting communities in America, including acts of workplace violence, K-12 school shootings, terrorism, and mass attacks in public spaces.

STEP 3: IDENTIFY AND PROCESS REPORTS OF CONCERNING BEHAVIOR

BTAUs must establish avenues to receive reports of concerning behavior in the community, including internal and external agency referrals and bystander reporting from the public. Without clear channels for reporting, BTAUs may miss opportunities to identify and intervene with individuals of concern. Units must further have the capability to triage all reports for imminent threats to life or safety and respond accordingly. BTAUs may then triage reports for relevancy to the units' objectives and share information with parties external to the units as necessary.

RECEIVE REPORTS AT A CENTRALIZED POINT

The Secret Service receives information relevant to the agency's protective mission from a variety of sources, including concerned bystanders, law enforcement agencies, and other organizations. Regardless of the source, all information with a Protective Intelligence nexus is collected and processed through a centralized operations center within the Secret Service. BTAUs will similarly receive reports of concerning behavior from within their own agency, members of the community, and outside law enforcement agencies and partner organizations, which should be routed to a

Threat assessment relates to the response to an active threat

WORKPLACE VIOLENCE

ISSUES IN RESPONSE

The Zero Tolerance Question

When it began appearing in the language three decades ago, the phrase “zero tolerance” customarily referred to a standard, rather than a penalty. Zero tolerance on drugs meant that the standard of conduct would be no drug use. Zero tolerance on harmful substances in food or water supplies meant that no amount of a particular toxic chemical or infectious agent would be considered safe.

Over the last decade, zero tolerance has taken on a different meaning: the application of an automatic penalty for a designated offense. In that sense the policy has at times been criticized for overriding judgment and common sense, as when school administrators acting under a zero tolerance drug or weapons policy expel a student for bringing a nail file to school or having a cold pill or a couple of aspirin tablets in a lunch box.

With regard to workplace violence, employers should make clear that zero tolerance in the original sense of the phrase applies—that is, no threatening or violent behavior is acceptable and no violent incident will be ignored. Company violence prevention policies should require action on all reports of violence, without exception. That does not mean, however, that a rigid, one-size-fits-all policy of automatic penalties is appropriate, effective or desirable. It may even be counterproductive, since employees may be more reluctant to report a fellow worker if he is subject to automatic termination regardless of the circumstances or seriousness of his offense.
